

Consent For Audio Recording

For subtests that require a verbal response, the audio recording function on the digital assessment administered on the iPad automatically records your (the client) responses. This allows for the recording to be replayed later to verify scoring. Audio recordings are only as long as the time spent on an individual item (e.g., if you spent 14 seconds on Item 8, the audio file will be 14 seconds long). These recorded responses can be reviewed any time after subtest administration and prior to removing the assessment battery from the iPad. Once the assessment has been scored it will be removed from the iPad and the audio files are deleted and cannot be recovered. Audio recordings are destroyed upon removal.

By signing this consent form, you are acknowledging and agreeing to have your verbal responses recorded during the digital assessments for the sole purpose of scoring the assessment. Once your assessment is scored your verbal responses are not stored by Arbor Mental Health Center and will be permanently removed and destroyed from the iPad.
